

Licensing Power Automate

Introduction to Power Automate

Power Automate helps organizations automate their business processes across modern systems with APIs as well as legacy apps without APIs. It drives end-to-end automation, from simple approvals to complex workflows, delivering benefits such as:

- Reducing manual, repetitive, time-consuming tasks
- Reducing costly errors from manual entry
- Saving time by recording and automating tedious tasks

Digital Process Automation (DPA)

Creating flows

The Digital Process Automation capabilities of Power Automate enable the automation of modern systems with APIs, putting the power of automation into the hands of all users.

Users can connect to more than 350 first- and third-party services with built-in API connectors for everything from Adobe to Zendesk to on-premises products. There are hundreds of triggers for them to initiate workflows in whatever way is most convenient – whether that’s with a button, through connected cloud apps, or on a schedule, and they can automate thousands of actions choosing from built-in actions or creating their own. It’s easy for all users to get started because there’s a large set of curated, pre-built templates that make it easier for users to start automating immediately and customize as their needs evolve.

350+ connectors

Hundreds of triggers

Thousands of actions

Pre-built templates

Licensing flows

Power Automate per User

\$15 per user per month

- A single license enables a user to create and access any number of flows across any environments
- Licenses are assigned to users via the Microsoft 365 Admin Center

Best for businesses that want one license for each user, regardless of the number of flows they need to run

Power Automate per Flow

\$100 per flow per month

- A single license enables unlimited users to access a flow across an organization
- Licenses are assigned to one flow via the Power Platform Admin Center
- Minimum purchase of 5 per Flow licenses

Best for businesses that want to implement flows for unlimited users across an organization

Robotic Process Automation (RPA)

Automating legacy applications

The Robotic Process Automation capabilities of Power Automate enable the automation of legacy apps where there aren't APIs or connectors.

Power Automate makes it easy for users to automate these legacy applications by recording mouse clicks, keyboard use, and data entry, and to automate the replay of the steps to be included in more complex process automations. These desktop flows can be run in two different modes:

Attended RPA

Runs on a worker's PC to automate cumbersome or repetitive processes, allowing the worker to correct any errors as needed. This approach achieves many benefits of automation while allowing for human intervention when human intelligence or business experience is required

Unattended RPA

Runs with no user logged in. Workflows trigger in the background, and then run at any time in the cloud. It is used to accelerate automation of high-volume, repetitive tasks without lifting a finger

Licensing desktop flows

Power Automate per User with Attended RPA

\$40 per user per month

- Includes the full capabilities of the Power Automate per User plan
- Includes desktop flow creation capabilities
- The desktop flow must run on the same workstation as the user is using
- Multiple desktop flows must be run sequentially

Triggered by an explicit user action on their workstation

Power Automate Unattended RPA add-on

\$150 per bot per month

Qualifying base licenses:

- Power Automate per User with Attended RPA
- Power Automate per Flow

Triggered in the background

Power Automate use rights included with Office 365 licenses

Select Microsoft 365 and Office 365 licenses include Power Automate functionality, where users with these licenses can create and access any number of flows, except business process flows, using standard connectors. See [this resource](#) for a list of connectors and classifications, and see this [technical documentation](#) for definitions of each flow type.

Additional resources

The Power Apps, Power Automate and Power Virtual Agents [Licensing Guide](#) is an excellent resource. It is updated frequently and can be found here: <https://bit.ly/2LNyW8E>.

The Power Apps, Power Automate and Power Virtual Agents [Licensing Deck](#) is useful for further information and can be found here: <https://bit.ly/3pTocVS>.
